### Specifications

Technical Specification

## **IMPORTANT FLOODCHECK SPECIFICATION DETAILS**

Please note: Flow is shown in Litres per Minute LPM

### **Electricity Details.**

All units operate on low voltage which is supplied via transformers. ( Power supplies)

Various plugs and input voltages are available to suit different contries supplies.

Typically Uk and Europe is 220 - 240 volts ac. USDA is 110-120 volts ac.

In the event of a power supply the units will stay in the mode of operation they were in just prior to the power failure.

Typically the water supply will be on at the time, so the user will not loose the water supply.

Some unit have built in back up batteies, but for all other there is optional back up battery packs available.

The backup battery pack will give protection for several days. Please contact us for more specific details.
